# Program Management

Program Management provides a structure for the successful completion of information technology initiatives. The URS-Apptis approach to Program Management is one that embraces the needed structure to couple information technology with adaptability.

This approach enables URS-Apptis to provide innovative solutions for programs that identify and respond to risks, achieve maximum agility and flexibility, meet program milestones on time, deliver cost savings, and provide a transparency for evaluating performance.

Our Program Management team utilizes best practices from industry-leading standards such as PMP, CMM/CMMI, ITIL, and ISO 9001:2008 and tools such as Primavera and Microsoft Project to build actionable and measurable program plans.

We have specialized experience with telecommunications transitions, program funding (OMB-300), return-on-investment evaluations, and performance-based contracting. URS-Apptis has applied our Program Management expertise and methodology across multiple government agencies with projects of varying sizes.

- Supporting telecom contract transitions for agencies with as many as 1,700 sites and 70,000 employees nationwide.
- Leading the Federal Emergency Management Agency's Disaster Assistance Improvement Program eGov initiative to develop information technology solutions to serve up to 750,000 concurrent disaster victims.
- Worldwide customer support of TRICARE Management Activity to manage complex health care solutions across multiple geographic locations.

## Proof of Performance

### General Services Administration (GSA) Information Technology Service Transition Coordination Center Support Service

URS-Apptis provides customer relationship, programmatic, and technical support to facilitate center consolidation. We participate in management, control, and operations of the Transition Coordination Center and offer expertise to transition GSA telecommunications services via Networkx contracts.

### DLA Defense Distribution Centers BRAC Infrastructure Upgrade Support

URS-Apptis provides program management and implementation services to support workforce changes related to the BRAC. We performed local area network extension installations at 26 Defense Distribution Centers worldwide and have migrated 4,000 new users. Additionally, URS-Apptis upgraded the network to meet increasingly stringent security and availability requirements.

### Securities and Exchange Commission (SEC)

Manage a refresh at the SEC Office of Information Technology (OIT) Information Technology Infrastructure Support Services, virtualizing 80% of the server infrastructure to provide a stable, flexible technical architecture enhancing the ability of the SEC to focus on its mission to oversee and regulate U.S. securities markets for continued growth in the nation's economy.

### Federal Aviation Administration (FAA)

URS-Apptis helped the FAA's Air Traffic Organization (ATO) transition 30,000 users from a multiple authentication environment to a single nationwide Windows Active Directory environment. This included requirements analyses, design, installation, migration, and post implementation support. Additionally, URS-Apptis supported the FAA ATO-Terminal Services with financial management support services; tracking allocated funds as well as requests for new funding for upcoming projects.
